

# Estimated Rates of Groundwater Recharge to the Chicot, Evangeline, and Jasper Aquifers by Using Environmental Tracers in Montgomery and Adjacent Counties, Texas, 2008 and 2011

Filesize: 4.52 MB

## Reviews

*This pdf is so gripping and intriguing. I could comprehend almost everything using this composed e ebook. You are going to like just how the article writer create this ebook.  
(Miss Dakota Zulauf)*

## ESTIMATED RATES OF GROUNDWATER RECHARGE TO THE CHICOT, EVANGELINE, AND JASPER AQUIFERS BY USING ENVIRONMENTAL TRACERS IN MONTGOMERY AND ADJACENT COUNTIES, TEXAS, 2008 AND 2011

To read **Estimated Rates of Groundwater Recharge to the Chicot, Evangeline, and Jasper Aquifers by Using Environmental Tracers in Montgomery and Adjacent Counties, Texas, 2008 and 2011** eBook, remember to refer to the link under and download the document or get access to additional information that are in conjunction with **ESTIMATED RATES OF GROUNDWATER RECHARGE TO THE CHICOT, EVANGELINE, AND JASPER AQUIFERS BY USING ENVIRONMENTAL TRACERS IN MONTGOMERY AND ADJACENT COUNTIES, TEXAS, 2008 AND 2011** ebook.

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Montgomery County is in the northern part of the Houston, Texas, metropolitan area, the fourth most populous metropolitan area in the United States. As populations have increased since the 1980s, groundwater has become an important resource for public-water supply and industry in the rapidly growing area of Montgomery County. Groundwater availability from the Gulf Coast aquifer system is a primary concern for water managers and community planners in Montgomery County and requires a better understanding of the rate of recharge to the system. The Gulf Coast aquifer system in Montgomery County consists of the Chicot, Evangeline, and Jasper aquifers, the Burkeville confining unit, and underlying Catahoula confining system. The individual sand and clay sequences of the aquifers composing the Gulf Coast aquifer system are not laterally or vertically continuous on a regional scale; however, on a local scale, individual sand and clay lenses can extend over several miles. The U.S. Geological Survey, in cooperation with the Lone Star Groundwater Conservation District, collected groundwater-quality samples from selected wells within or near Montgomery County in 2008 and analyzed these samples for concentrations of chlorofluorocarbons (CFCs), sulfur hexafluoride (SF6), tritium (3H), helium-3/tritium (3He/3H), helium-4 (4He), and dissolved gases (DG) that include argon, carbon dioxide, methane, nitrogen and oxygen. Groundwater ages, or apparent age, representing residence times since time of recharge, were determined by using the assumption of a piston-flow transport model. Most of the environmental tracer data indicated the groundwater was recharged prior to the 1950s, limiting the usefulness of CFCs, SF6, and 3H concentrations as tracers. In many cases, no tracer was usable at a well for the purpose of estimating an apparent age. Wells not usable for estimating an...
