For live load on the left the stress in Cd is and the counter Dc comes into action. To find the stress for Dc, we have-- $17.5 \times 105 + 10(120 + 135) - 5 \times 88.41 = 0$, from which $S = + 8.0$ tons. In the same manner all the other stresses are found and marked on the diagram. The method of resolution of forces can also be used to find the stresses in the diagonals; the load being put on the truss in the proper position and the two adjacent chord stresses being found by moments, the difference of these is the horizontal...
